Business Employment Dynamics in Texas – First Quarter 2017

From December 2016 to March 2017 **gross job gains** in private sector establishments in Texas totaled 580,416, while **gross job losses** numbered 519,376, the U.S. Bureau of Labor Statistics reported today. Assistant Commissioner for Regional Operations Stanley W. Suchman noted that the difference between the number of gross job gains and the number of gross job losses yielded a **net employment gain** of 61,040 from December 2016 to March 2017. During the previous quarter, gross job gains exceeded gross job losses by 50,076. (See [chart 1](#) and [table 1](#).)

Chart 1. Private sector gross job gains and losses in Texas, March 2012–March 2017, seasonally adjusted

Source: U.S. Bureau of Labor Statistics.

The change in the number of jobs over time is the net result of increases and decreases in employment that occur at all businesses in the economy. Business Employment Dynamics (BED) statistics track these changes in employment at private business establishments from the third month of one quarter to the third month of the next. Gross job gains are the sum of increases in employment from expansions at existing establishments and the addition of new jobs at opening establishments. Gross job losses are the result of contractions in employment at existing establishments and the loss of jobs at closing establishments. The difference between the number of gross job gains and the number of gross job losses is the net change in employment. (See the [Technical Note](#) for more information.)

Texas gross job gains reached 617,457 in September 2016, the second-highest level in the history of the series, before declining to 588,802 in December 2016 and 580,416 in March 2017. Gross job losses in Texas had generally trended upward since a recent low of 433,128 recorded in March 2011. However, gross job losses have fallen in each quarter since March 2016. (See [chart 1](#).)

Gross job gains represented 5.8 percent of private sector employment in Texas in the quarter ended March 2017; nationally gross job gains accounted for 6.0 percent of private sector employment. (See [chart 2](#).) During the past five years, the rate of gross job gains in Texas has remained below the national rate. The state's rate of gross job losses as a percent of private sector employment was 5.2 percent in the first quarter of 2017 compared to the national rate of 5.4 percent. With the exception of March 2016, gross job loss rates in Texas have remained below the U.S. rates since March 2003.

Chart 2. Private sector gross job gains and losses as a percent of employment, United States and Texas, March 2012–March 2017, seasonally adjusted

Source: U.S. Bureau of Labor Statistics.

During the first quarter of 2017, gross job gains exceeded gross job losses in 10 of the 11 industry sectors in Texas. For example, within professional and business services, opening and expanding establishments added nearly 115,000 jobs, while closing and contracting establishments lost more than 99,000 jobs. The resulting net gain of 15,582 jobs was the largest of any Texas sector in the first quarter of 2017. In education and health services, about 72,600 jobs were created in opening and expanding establishments and about 62,800 were lost in closing and contracting establishments, resulting in a net employment gain of 9,787, the second largest among the state's sectors. Opening and expanding establishments in Texas's construction sector added nearly 58,300 jobs while losing more than 49,400 jobs at closing and contracting establishments, for a net gain of 8,887 jobs. (See [table 1](#).)

The transportation and warehousing industry sector had the only net job decrease in the first quarter of 2017. With nearly 28,000 gross jobs losses in closing and contracting establishments and about 21,600 gains in opening and expanding establishments, this sector lost 6,387 jobs.

Additional statistics and other information

BED data for the states have been included in [table 2](#) of this release. For more information on the Business Employment Dynamics data, visit the BED web site at www.bls.gov/bdm/.

The Business Employment Dynamics release for Second Quarter 2017 is scheduled to be released on Wednesday, January 24, 2018 at 10:00 am (EST).

Revisions to Business Employment Dynamics (BED) Data

Data in this release incorporate annual revisions to the BED series. Annual revisions are published each year with the release of first quarter data. These revisions cover the last four quarters of not seasonally adjusted data and five years of seasonally adjusted data.

Technical Note

The Business Employment Dynamics (BED) data are a product of a federal-state cooperative program known as Quarterly Census of Employment and Wages (QCEW), or the ES-202 program. The BED data are compiled by the U.S. Bureau of Labor Statistics (BLS) from existing QCEW records. Most employers in the U.S. are required to file quarterly reports on the employment and wages of workers covered by unemployment insurance (UI) laws, and to pay quarterly UI taxes. The QCEW is based largely on quarterly UI reports which are sent by businesses to the State Workforce Agencies (SWAs). These UI reports are supplemented by two additional BLS data collections to render administrative data into economic statistics. Together these data comprise the QCEW and form the basis of the Bureau's establishment universe sampling frame.

In the BED program, the quarterly QCEW records are linked across quarters to provide a longitudinal history for each establishment. The linkage process allows the tracking of net employment changes at the establishment level, which in turn allows the estimation of jobs gained at opening and expanding establishments and jobs lost at closing and contracting establishments.

The change in the number of jobs over time is the net result of increases and decreases in employment that occur at all businesses in the economy. BED statistics track these changes in employment at private business establishments from the third month of one quarter to the third month of the next. Gross job gains are the sum of increases in employment from expansions at existing establishments and the addition of new jobs at opening establishments. Gross job losses are the result of contractions in employment at existing establishments and the loss of jobs at closing establishments. The difference between the number of gross jobs gained and the number of gross jobs lost is the net change in employment.

Gross job gains and gross job losses are expressed as rates by dividing their levels by the average of employment in the current and previous quarters. The rates are calculated for the components of gross job gains and gross job losses and then summed to form their respective totals. These rates can be added and subtracted just as their levels can. For instance, the difference between the gross job gains rate and the gross job losses rate is the net growth rate.

The formal definitions of employment changes are as follows:

Openings. These are either establishments with positive third month employment for the first time in the current quarter, with no links to the prior quarter, or with positive third month employment in the current quarter following zero employment in the previous quarter.

Expansions. These are establishments with positive employment in the third month in both the previous and current quarters, with a net increase in employment over this period.

Closings. These are either establishments with positive third month employment in the previous quarter, with no employment or zero employment reported in the current quarter.

Contractions. These are establishments with positive employment in the third month in both the previous and current quarters, with a net decrease in employment over this period.

Information in this release will be made available to sensory impaired individuals upon request: voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.
